MATH 1530 ABSTRACT ALGEBRA Selected solutions to problems Problem Set 2.2. Define a relation \sim on \mathbb{Z} given by $a \sim b$ if $a - b \in 2\mathbb{Z}$. (a) Prove that \sim is an equivalence relation. (b) Let $R = \mathbb{Z}/\sim$ denote the set of equivalence classes of \sim . Prove that the binary operation $+$ on $R = \mathbb{Z}/\sim$ given by $a + b = a + b$ is well-defined.

about abstract algebra. Instead of just expanding the material that is already written down in our textbook, I decided to try to teach by example, by writing out solutions to problems. I've tried to choose problems that would be instructive, and in quite a few cases I've included comments to help the reader see what is really going on.

However, one of the major problems in teaching an abstract algebra course is that for many students it is their first encounter with an environment that requires them to do rigorous proofs. Such students often find it hard to see the use of learning to prove theorems and propositions; applied examples help the instructor provide motivation.
