This essential reference work should be required reading for all aspiring apparel designers and manufacturers. Thorough and informative, it will be your personal guide to getting started in the apparel and sewn products industry. Key topics include targeting your market, sourcing materials and trims, correctly coating your products, manufacturing, distribution and inventory management. Information is presented in a clear, concise manner. Graphics and comics are used throughout the text. This second edition includes an expanded glossary of industry terms, fabric and trade show source lists and an actual business plan. Numerous blank forms are included for use in the industry and classroom.

Automation in Garment Manufacturing provides systematic and comprehensive insights into this multifaceted process. Chapters cover the role of automation in design and product development, including color matching, fabric inspection, 3D body scanning, computer-aided design and prototyping. Part Two covers automation in garment production, from handling, spreading and cutting, through to finishing and pressing techniques. Final chapters discuss advanced tools for assessing productivity in manufacturing, logistics and supply-chain management. This book is a key resource for all those engaged in textile and apparel development and production, and is also ideal for academics engaged in research on textile science and technology. Delivers theoretical and practical guidance on automated processes that benefit anyone developing or
