This guidebook brings together the knowledge, insight and experience gained by the participants of an international telecollaborative language learning project entitled Moderating Intercultural Collaboration and Language Learning (MICaLL). Telecollaboration is understood here as a shared teaching and learning experience between distanced partners that is facilitated through the use of Internet technology; an area of growing interest for many teachers. The book first provides a theoretical outline of suitable pedagogical practices for this type of joint effort and then moves into the more practical aspects of designing, setting up, implementing and evaluating telecollaborative projects. The guidebook considers relevant questions and issues which often come up when teachers without previous experience in telecollaboration undertake this type of enterprise. Through the realistic advice and practical examples provided, the reader will be motivated to engage in telecollaborative language learning projects with their own pupils.

This book reignites discussion on the importance of collaboration and innovation in language education. The pivotal difference highlighted in this volume is the concept of team learning through collaborative relationships such as team teaching. It explores ways in which team learning happens in ELT environments and what emerges from these explorations is a more robust concept of team learning in language education. Coupled with this deeper understanding, the value of participant research is emphasised by defining the notion of 'team' to include all participants in the educational experience. Authors in this volume position practice ahead of theory as they struggle to make sense of the complex phenomena of language teaching and learning. The focus of this book is on the nexus between ELT theory and practice as viewed through the lens of collaboration. The volume aims to add to the current knowledge base in order to bridge the theory-practice gap regarding collaboration for innovation in language classrooms.

Although most writing instructors know the benefits of collaborative learning and writing in college writing classes, many remain unsure how to implement collaborative techniques successfully in the classroom. This collection provides a diversity of voices that address the "how tos" of collaborative learning and writing by addressing key concerns about the process. Fresh essays consider the importance of collaborative work and peer review, the best ways to select groups in classes, integration of collaborative learning techniques into electronic environments, whether group learning and writing are appropriate for all writing classes, and ways special populations can benefit from collaborative activities. Despite its challenges, collaborative learning can prove remarkably effective and this study provides the advice to make it work smoothly and successfully.

Since the introduction of communicative language teaching, collaborative learning has played an important role in the second language (L2) classroom. Drawing from sociocultural theory, which states that human cognitive development is a socially situated activity mediated by language, studies in L2 pedagogy advocate the use of tasks that require learners to work together. Collaborative dialogue encourages language learning, and research shows that the solutions reached by students in this process are more often correct with a lasting influence on their language comprehension. This volume includes ten chapters that illustrate the benefits of collaborative dialogue in second foreign language classrooms. The volume considers key issues dealing with collaborative tasks and implications for language teaching.
