Hans J. Nissen here provides a much-needed overview of 7000 years of development in the ancient Near East from the beginning of settled life to the formation of the first regional states. His approach to the study of Mesopotamian civilization differs markedly from conventional orientations, which impose a sharp division between prehistoric and historic, literate, periods. Nissen argues that this approach is too rigid to explain the actual development of that civilization. He deemphasizes the invention of writing as a turning point, viewing it as simply one more phase in the evolution of social complexity and as the result of specific social, economic, and political factors. With a unique combination of material culture analysis written data, Nissan traces the emergence of the earliest isolated settlements, the growth of a network of towns, the emergence of city states, and finally the appearance of territorial states. From his synthesis of the prehistoric and literate periods comes a unified picture of the development of Mesopotamian economy, society, and culture. Lavishly illustrated, The Early History of the Ancient Near East, 9000-2000 B.C. is an authoritative work by one of the most insightful observers of the evolution and character of Mesopotamian civilization.

"The Oxford History of the Ancient Near East offers a comprehensive and fully illustrated survey of the history of Egypt and Western Asia (Levant, Anatolia, Mesopotamia and Iran) in five volumes, from the emergence of complex states to the conquest of Alexander of Great. The authors represent a highly international mix of leading academics whose expertise brings alive the people, places and times of the remote past. The emphasis lies firmly on the political and social histories of the states and communities under investigation. The individual chapters present the key textual and material sources underpinning the historical reconstruction, giving special attention to the most recent archaeological finds and how they have impacted our interpretation. The first volume covers the long period from the mid-tenth millennium to the late third millennium BC and presents the history of the Near East in ten chapters "From the Beginnings to Old Kingdom Egypt and the Dynasty of Akkad". Key topics include the domestication of animals and plants, the first permanent settlements, the subjugation and appropriation of the natural environment, the emergence of complex states and belief systems, the invention of the earliest writing systems and the wide-ranging trade networks that linked diverse population groups across deserts, mountains and oceans"--

This book offers a concise survey of Western Civilization from the Stone Age through the fall of the last Western Roman Emperor in AD 476. Each of the three sections chronicle a critical epoch in human history. Section I encompasses man's ascent from barbarism to civilization in the Ancient Near East; Section II witnesses the development of Western Civilization in Ancient Greece; and Section III catalogs the failed attempt to build the West's first (nation-state) in Ancient Rome. Human foibles are abundantly portrayed but so too is the ascent of humankind.

This introduction to the Ancient Near East includes coverage of Egypt and a balance of political, social, and cultural coverage. This combination allows students to get a rounded introduction to the subject of Ancient Near Eastern history. An emphasis on problems and areas of uncertainty helps students understand how evidence is used to create interpretations and allows them to realize that several different interpretations of the same evidence are possible. In this sweeping overview of life in the ancient Near East, Daniel Snell surveys the history of the region from the invention of writing five thousand years ago to Alexander the Great's conquest in 332 B.C.E. The book is the first comprehensive history of the social and economic conditions affecting ordinary people and of the relations between governments and peoples in ancient Egypt, Jordan, Israel, Iran, Iraq, Lebanon, Syria, and Turkey. To set Near East developments in a broader context, the author also provides brief contrasting views of India, China, Greece, and Etruscan Italy. Snell organizes his book chronologically in time spans of about five hundred years and considers broad continuities. Drawing on the latest scholarship in many fields and in many languages, he sets forth a detailed picture of what is known about the demography, social groups, family, women, labor, land and animal management, crafts, trade, money, and government of the ancient Near East. For general readers with an interest in historical events that have influenced the development of Europe and the Middle East, for specialists seeking a broader understanding of early periods of Middle Eastern history, and for anyone with an interest in the Bible, this book offers a fascinating tour of life in ancient Western Asia.
