HOW FAR WILL OTTO GO TO PROTECT HIS FRIENDS? Otto Malpense and his friends thought their first year at the Higher Institute of Villainous Education was the most adventurous and exciting that they would ever encounter. They were dead wrong. When Otto and Wing are allowed off campus to attend Wing's father's funeral, they have no idea it's a trap, all part of a lethal plan organized by Cypher, the most ruthless supervillain any of them have ever known. He intends to use them to retrieve the Overlord Protocol, a device that has the capacity to help him take over the world. But when things go terribly wrong, Otto will stop at nothing to hunt him down and make him pay. With the help of Laura, Shelby, Raven, and his former nemesis, Dr. Nero, Otto must find a way to defeat an enemy that has overcome some of the planet's most infamous villains without even breaking a sweat. Because if he doesn't, the world as they know it will be changed forever.

HIGHER INSTITUTE OF VILLAINOUS EDUCATION Otto Malpense may only be thirteen years old, but so far he has managed to run the orphanage where he lives, and he has come up with a plan clever enough to trick the most powerful man in the country. He is the perfect candidate to become the world's next supervillain. That is why he ends up at H.I.V.E., handpicked to become a member of the incoming class. The students have been kidnapped and brought to a secluded island inside a seemingly active volcano, where the school has resided for decades. All the kids are elite; they are the most athletic, the most technically advanced, and the smartest in the country. Inside the cavernous marble rooms, floodlit hangars, and steel doors, the students are enrolled in Villainy Studies and Stealth and Evasion 101. But what Otto soon comes to realize is that this is a six-year program, and leaving is not an option. With the help of his new friends: an athletic martial-arts expert; a world-famous, beautiful diamond thief; and a spunky computer genius -- the only other people who seem to want to leave -- can Otto achieve what has never been done before and break out of H.I.V.E.?

A flame-throwing epidemiologist talks about sex, drugs, and the mistakes (dismal), ideologies (vicious), and hopes (realistic) of international AIDS prevention. When people ask Elizabeth Pisani what she does for a living, she says, "sex and drugs." As an epidemiologist researching AIDS, she's been involved with international efforts to halt the disease for fourteen years. With swashbuckling wit and fierce honesty, she dishes on herself and her colleagues as they try to prod reluctant governments to fund HIV prevention for the people who need it most—drug injectors, gay men, sex workers, and johns. Pisani chats with flamboyant Indonesian transsexuals about their boob jobs and watches Chinese streetwalkers turn away clients because their SUVs aren't nice enough. With verve and clarity, she shows the general reader how her profession really works; how easy it is to draw wrong conclusions from "objective" data; and, shockingly, how much money is spent so very badly. "Exhibit A": the 45 billion taxpayer dollars the Bush administration is committing to international AIDS programs.

Pupils and staff at H.I.V.E. are horrified to discover that Dr Nero has been captured by the forces of H.O.P.E., the Hostile Operative Prosecution Executive, the world's newest and most ruthlessly efficient security force. Three months pass without any news of his fate, and Number One has decided to appoint a sinister new headmistress for the school, somebody that the pupils and staff had thought that they'd seen the last of. Meanwhile Otto is also struggling to cope with new abilities that are starting to manifest themselves; can he really be unconsciously interfacing with computers without physical contact? And if he is, what exactly do these new powers really mean? The only way to find Nero and the truth behind the lies is to escape H.I.V.E.. Otto must get out, and take the risks which come with being a rogue agent. Then he just has to break into MI6.

Examines the change in memory regime in postwar France, from one centered on the concentration camps to one centered on the Holocaust.

The Food and Agriculture Organization of the United Nations has recently estimated that the world equid population exceeds 110 million. Working equids (horses, ponies, donkeys, and mules) remain essential to ensure the livelihood of poor communities around the world. In many developed countries, the equine industry has significant economical weight, with around 7 million horses in Europe alone. The close relationship between humans and equids and the fact that the athlete horse is the terrestrial mammal that travels the most worldwide after humans are important elements to consider in the transmission of pathogens and diseases, amongst equids and to other species. The potential effect of climate change on vector ecology and vector-borne diseases is also of concern for both human and animal health. In this Special Issue, we intend to explore our understanding of a panel of equine viruses, looking at their pathogenicity, their importance in terms of welfare and potential association with diseases, their economic importance and impact on performance, and how their identification can be helped by new technologies and methods.

While en route to a training exercise in the Arctic, Otto and his friends stop off for a tour of the new G.L.O.V.E. flagship, Dreadnought, and when Dreadnought is commandeered by a rogue villain, they try to thwart his evil plans.

Earthfall, the fourth volume in Orson Scott Card's space opera Homecoming series The Oversoul of the colony planet Harmony selected the family of Wetchik to carry it back to long-lost Earth. Now grown to a tribe in the years of their journey to Harmony's hidden starport, they are ready at last to take a ship to the stars. But from the beginning there has been bitter dispute between Nafai and Elemak, Wetchick's youngest son and his oldest. On board the starship Bailica, the children of the tribe will become pawns in the struggle. Two factions are each making secret plans to awaken the children, and themselves, early from the cold-sleep capsules in which they will pass the long decades of the journey. Each side hopes to gain years of influence on the minds of the children, winning their loyalty in the struggle for control of reclaimed Earth. But the Oversoul is truly in control of this journey. It has downloaded a complete copy of itself to the Ship's computers. And only Nafai, who wears the Cloak of the Starmaster by the Oversoul's command, really understand what this will mean to all their plans for the future. Homecoming series The Memory of Earth The Call of Earth The Ships of Earth Earthfall Earthborn At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

High-octane adventures continue in the eighth book of the H.I.V.E. series, and the team of supremely talented criminals is forced to question everything they know about life as villains. Otto and Raven are desperate to rescue their friends from the clutches of Anastasia Furan, head of the evil Disciples organization. First they must track down the location of the Glasshouse, the prison where Furan trains children to become ruthless assassins. But Otto is also being hunted. In the three months since his "expulsion" from H.I.V.E., The Artemis Section—an elite intelligence division that goes after the toughest targets and reports only to the US president—has had an opportunity to locate him. Set against the backdrop of a daring high-tech prison break, nothing is quite as it seems in Deadlock.

Contested Terrain provides a cutting-edge, comprehensive and innovative approach to critically analysing the multidimensional and contested nature of security narratives, justified by different ideological, political, cultural and economic rationales. This is important in a complex and ever-changing situation involving a dynamic interplay between local, regional and global factors. Security narratives are constructed in multiple ways and are used to frame our responses to the challenges and threats to our sense of safety, wellbeing, identity and survival but how the narratives are constructed is a matter of intellectual and political contestation. Using three case studies from the Pacific (Fiji, Tonga and Solomon Islands), Contested Terrain shows the different security challenges facing each country, which result from their unique historical, political and socio-cultural circumstances. Contrary to the view that the Pacific is a generic entity with common security issues, this book argues for more localised and nuanced approaches to security framing and analysis.
