*Collaborative Practice for Public Health* encourages individuals to consider the opportunities and impacts of working in public health as well as the gains that can be made by working collaboratively. Chapters explore some of the sociological issues that underpin the practice of public health and offer valuable insights into its complexities, addressing how different groups might work together effectively in the creation and delivery of public health policy. The book also examines interprofessional education, and collaborative working in the non-profit sector and in primary care, and discusses why moving out of silos is an important factor in promoting collaborative working, not as a shared occasional endeavour, but as the underpinning experience for practice. Through examples, definitions, and a focus on real-life situations, this practical guide illustrates the different ways in which public health permeates health

and social care in the UK and internationally.

Collaborative Practice in Palliative Care explores how different professions work collaboratively across professional, institutional, social, and cultural boundaries to enhance palliative care. Analysing palliative care as an interaction between different professionals, clients, and carers, and the social context or community within which the interaction takes place, it is grounded in up-to-date evidence, includes global aspects of palliative care and cultural diversity as themes running throughout the book, and is replete with examples of good and innovative practice. Drawing on experiences from within traditional specialist palliative care settings like hospices and community palliative care services, as well as more generalist contexts of the general hospital and primary care, this practical text highlights the social or public health model of palliative care. Designed to support active learning, it includes features such as case studies, summaries, and pointers to other learning resources. This text is an important reference for all professionals engaged in palliative care, particularly those studying for post-qualification programmes in the area.

The provision of care within the context of the modern health service environment involves a wide range of professionals. The health care team might include general practitioners, nurses, midwives, hospital doctors, physiotherapists, other allied health professionals, as well as receptionists and practice managers. To optimise delivery of care at both individual and population levels, team members must work collaboratively with colleagues in their own profession and others. This book, in the Values-Based Medicine series, adds the dimension of values to the more usual discussions of teamwork, considering interactions between health care professionals and how these might be affected by differences in professional and personal values. Examples of scenarios based on real-life experience promote learning and reflection. Anybody working or training in health care and who aspires to collaborate successfully with their colleagues in other specialties will find this book extremely valuable, as will educators who facilitate learners in teamwork.

The Power of Colleagues What happens when primary care clinicians meet together on set aside time in their practice settings to talk about their own patients? .....Complimenting quality metrics or performance measures through discussing the actual stories of individual patients and their clinician-patient relationships In these settings, how can clinicians pool their collective experience and apply that to 'the evidence' for an individual patient? .....Especially for patients who do not fit the standard protocols and have vague and worrisome symptoms, poor response to treatment, unpredictable disease courses, and/or compromised abilities for shared decision making What follows when discussion about individual patients reveals system-wide service gaps and coordination limitations? .....Particularly for patients with complex clinical problems that fall outside performance monitors and quality screens How can collaborative engagement of case-based uncertainties with one's colleagues help combat the loneliness and helplessness that PCPs can experience, no matter what model or setting in which they practice? .....And where they are expected to practice coordinated, evidence-based, EMR-directed care These questions inspired Lucia Sommers and John Launer and their international contributors to explore the power of colleagues in "Clinical Uncertainty in Primary Care: The Challenge of Collaborative Engagement" and offer antidotes to sub-optimal care that can result when clinicians go it alone. From the Foreword: "Lucia Sommers and John Launer, with the accompanying input of their contributing authors, have done a deeply insightful and close-to-exhaustive job of defining clinical uncertainty. They identify its origins, components and subtypes; demonstrate the ways in which and the extent to which it is intrinsic to medicine...and they present a cogent case for its special relationship to primary care practice...'Clinical Uncertainty in Primary Care' not only presents a model of collegial collaboration and support, it also implicitly legitimates it.'" Renee Fox, Annenberg Professor Emerita of the Social Sciences, University of Pennsylvania.
