Based on the successful, proven Thinking Maps model developed by David Hyerle, this book makes a compelling case for making an explicit focus on thinking the foundation for every school. Enabling all students to become drivers of their own thinking and learning, a Thinking School is defined as an educational community in which all members share a common commitment to giving regular, careful thought to everything that takes place including learning how to think reflectively, critically and creatively.

Policy informatics is addressing governance challenges and their consequences, which span the seeming inability of governments to solve complex problems and the disaffection of people from their governments. Policy informatics seeks approaches that enable our governance systems to address increasingly complex challenges and to meet the rising expectations of people to be full participants in their communities. This book approaches these challenges by applying a combination of the latest American and European approaches in applying complex systems modeling, crowdsourcing, participatory platforms and citizen science to explore complex governance challenges in domains that include education, environment, and health.

he visual inputs we receive can be collectively called visual data. Precisely how one defines visual data is a key question to ask. That is one of the questions we asked each author who wrote a chapter for this book.

This new edition presents eight powerful visual models that boost all learners' metacognitive and critical thinking skills. Updates include new research, examples, and applications.

This book provides a comprehensive approach to the study of policy analytics, modelling and informatics. It includes theories and concepts for understanding tools and techniques used by governments seeking to improve decision making through the use of technology, data, modelling, and other analytics, and provides relevant case studies and practical recommendations. Governments around the world face policy issues that require strategies and solutions using new technologies, new access to data and new analytical tools and techniques such as computer simulation, geographic information systems, and social network analysis for the successful implementation of public policy and government programs. Chapters include cases, concepts, methodologies, theories, experiences, and practical recommendations on data analytics and modelling for public policy and practice, and addresses a diversity of data tools, applied to different policy stages in several contexts, and levels and branches of government. This book will be of interest of researchers, students, and practitioners in e-government, public policy, public administration, policy analytics and policy informatics.

Today's project manager has more to manage than just project scope, deliverables, communications and teams. They are also expected to manage large volumes of project-related data. And the expectation goes beyond just managing the data. It extends into creating great visualizations that allow stakeholders to fully digest that large volume of data in a manner that is quick, effective and clear. They are also expected to serve as facilitators in the use of visual thinking tools as a method for working through project issues, risks and problems. These new expectations require new skills. The era of multi-page, text-based project status reporting is over. The era of visual project management is here. Time to "skill up!"

One of the most important aspects of a comprehensive education involves teaching students to analyze arguments and form their own opinions based on available information. Visual and graphical mapping strategies are useful in helping students to consider problems from a variety of perspectives. Cases on Teaching Critical Thinking through Visual Representation Strategies brings together research from scholars and professionals in the field of education to provide new insights into the use of visual aids for student development in reasoning and critical thinking. This essential reference source will enable academics, researchers, and practitioners in fields such as education, business, and technology to more effectively foster students' critical thinking skills.

Visual Leap is a how-to book for teachers, students and parents interested in making learning easier. In step-by-step fashion, it presents an effective, universal, visual method to teach students how to think independently and critically, and how to organize their ideas for any instructional purpose. The visual strategies are rooted in the science of human learning and are effective because they tap into the ways that we learn naturally. The Visual Leap method simplifies teaching the skills of the Common Core State Standards and gives teachers explicit ways to differentiate instruction to meet the needs of all learners. The strategies work across many grade levels and subject areas and for a wide variety of instructional objectives across the curriculum, such as vocabulary acquisition, reading comprehension, writing, speaking, and listening. Visual Leap offers easy ways to foster dynamic, creative, and critical thinking in the classroom, and provides teachers and students with a toolkit of problem-solving and learning strategies designed to serve them throughout their academic and professional lives.
