Comparing Climate Regions and Biomes

Biome: A large geographical region whose climate produces a characteristic climax association of plants and animals. The term biome usually refers to terrestrial habitats (on land). In North America there are about six major biomes. Aquatic ecosystems, such as the ocean, are often subdivided into different zones, such as the intertidal, pelagic, benthic, photic and aphotic zones.

Biomes - Palomar College

Mid-Holocene biomes were similar in structure to those of today, but shifts in the relative importance of individual plant functional types are large enough that the physical properties of biomes, such as albedo, canopy conductance and surface roughness, are likely to have varied even during the Holocene.
