General Principles of Endovascular Therapy: Angioplasty, Stenting, Recanalization, and Embolization. Historical Background. Angioplasty was first used by Dotter and Judkins in 1964 for the treatment of peripheral vascular lesions using rigid intravascular dilators. Although relatively unnoticed in the United States, this approach was used to treat large numbers of patients in Europe.

General Principles of Endovascular Therapy: Angioplasty

...

An endovascular procedure is performed inside your artery using a thin, long tube called a catheter. Through a small incision in the groin, the catheter is then guided by the surgeon to the blocked area in the blood vessel. From there, the surgeon will perform an endovascular treatment, such as balloon angioplasty or stenting.
