Recommendations for the introduction of common allergens to infants has changed over the last few years as research has emerged on ways to help prevent the development of food allergy in babies. In 2019, the Canadian Paediatric Society (CPS) released updated recommendations on the specific timing of early introduction of allergenic foods for high-risk infants. The new guidance is to actively offer non-choking forms of foods containing common allergens (e.g. peanuts, egg) around 6 months of ...

As your baby's oral skills develop, thicker and lumpier foods can be introduced. Some foods are potential choking hazards, so it is important to feed your child foods that are the right texture for his or her development. To help prevent choking, prepare foods that can be easily dissolved with saliva and do not require chewing.
