Electronic warfare (EW) receivers-radar warning receivers and jammer receiver processors-are an element of Electronic Support (ES). EW receivers provide situational awareness (SA) about radar systems and other emitters (e.g., radios, data links) in the radio frequency (RF) environment [Neri, 2006, Chapter 4; Schleher, 1999, Chapter 6].

Electronic warfare is any action involving the use of the electromagnetic spectrum or directed energy to control the spectrum, attack an enemy, or impede enemy assaults. The purpose of electronic warfare is to deny the opponent the advantage of, and ensure friendly unimpeded access to, the EM spectrum. EW can be applied from air, sea, land, and/or space by manned and unmanned systems, and can target humans, communication, radar, or other assets.

Electronic warfare - Wikipedia

Electronic jamming is a form of electronic warfare where jammers radiate interfering signals toward an enemy's radar, blocking the receiver with highly concentrated energy signals. The two main technique styles are noise techniques and repeater techniques. The three types of noise jamming are spot, sweep, and barrage.
